

FROM PROMPT TO PREMIERE

Agentic video production with Slate

> Make a 60-second launch video about agentic AI.

SCRIPT

SCENES

VOICE

RENDER

Video is not one task.

It is a relay race across specialized skills, tools, and approvals.

01 Story

What is the point?

02 Design

What should we see?

03 Voice

How should it sound?

04 Edit

How does it move?

05 Review

Is it accurate and safe?

06 Deliver

Can anyone reproduce it?

The bottleneck is not generation. **It is orchestration.**

Four curves crossed.

Agentic video became practical when creation, orchestration, rendering, and governance matured together.

1

MULTIMODAL MODELS

Image, speech, transcription, and short video are callable tools.

2

CODING AGENTS

Agents can read files, run tools, inspect results, and iterate.

3

DETERMINISTIC RENDERING

HTML, GSAP, and headless capture make motion reproducible.

4

ENTERPRISE CONTROLS

Approval gates, cost limits, brand rules, and audit trails.

NOW

ORIGIN

Open-source spark. Enterprise reimagination.

Slate was inspired by the popularity and lessons of OpenMontage, created by the same author.

OPEN SOURCE

OpenMontage

Proved the appetite for turning a coding assistant into a production studio.

ENTERPRISE

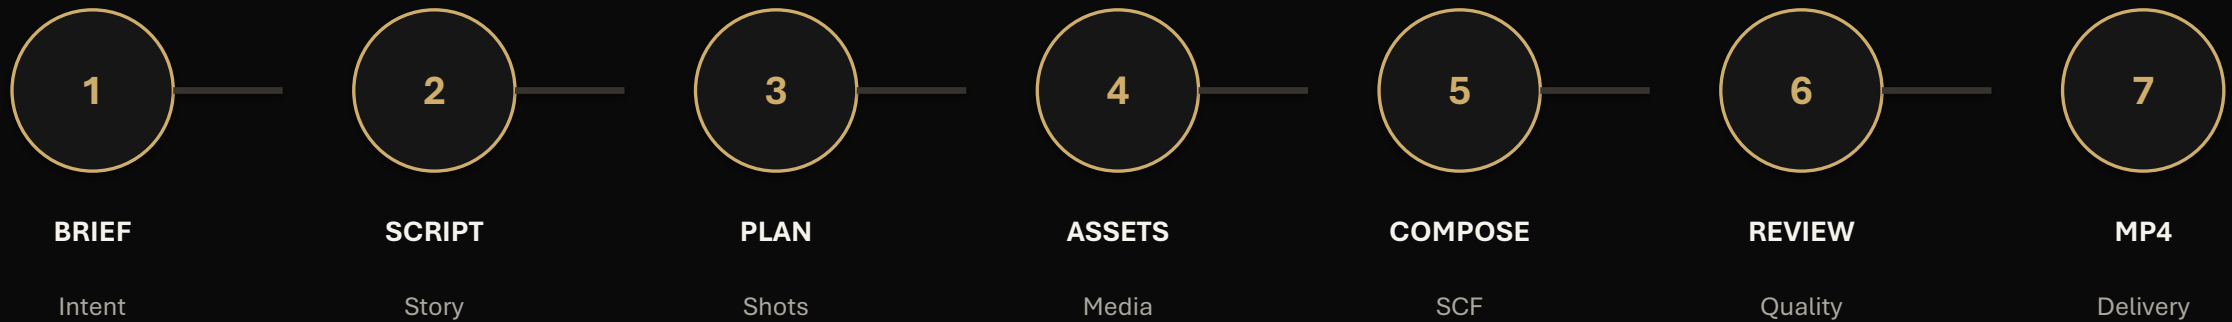

Slate

Reimagined the patterns for Azure, brand governance, auditability, and human approval.

Clean-room implementation. No OpenMontage source code is used.

Slate is an AI video director.

Not a single generator. Not a timeline editor. An agent coordinating a production.

Creative freedom inside each stage. **Human control** at every boundary.

Creative judgment on top. Deterministic machinery below.

DIRECTOR AGENT

Intent, research, script, art direction, decisions

SLATE ENGINE

Tools, capability registry, costs, trace, SCF compiler

CREATIVE SERVICES

Azure AI Foundry: image, speech, transcription, video

LOCAL PRODUCTION

HyperFrames + GSAP + headless Chrome + FFmpeg

INDEPENDENT REVIEWER

Validation, frame/audio inspection, governance

LET'S MAKE ONE.

A product launch video from one prompt.

- > **Create a 60-second launch video for a new AI product. Audience: developers. Tone: bold, credible, and cinematic. Show the workflow.**

WHAT WE WATCH

Brief -> script -> storyboard -> assets -> MP4

WHAT WE DECIDE

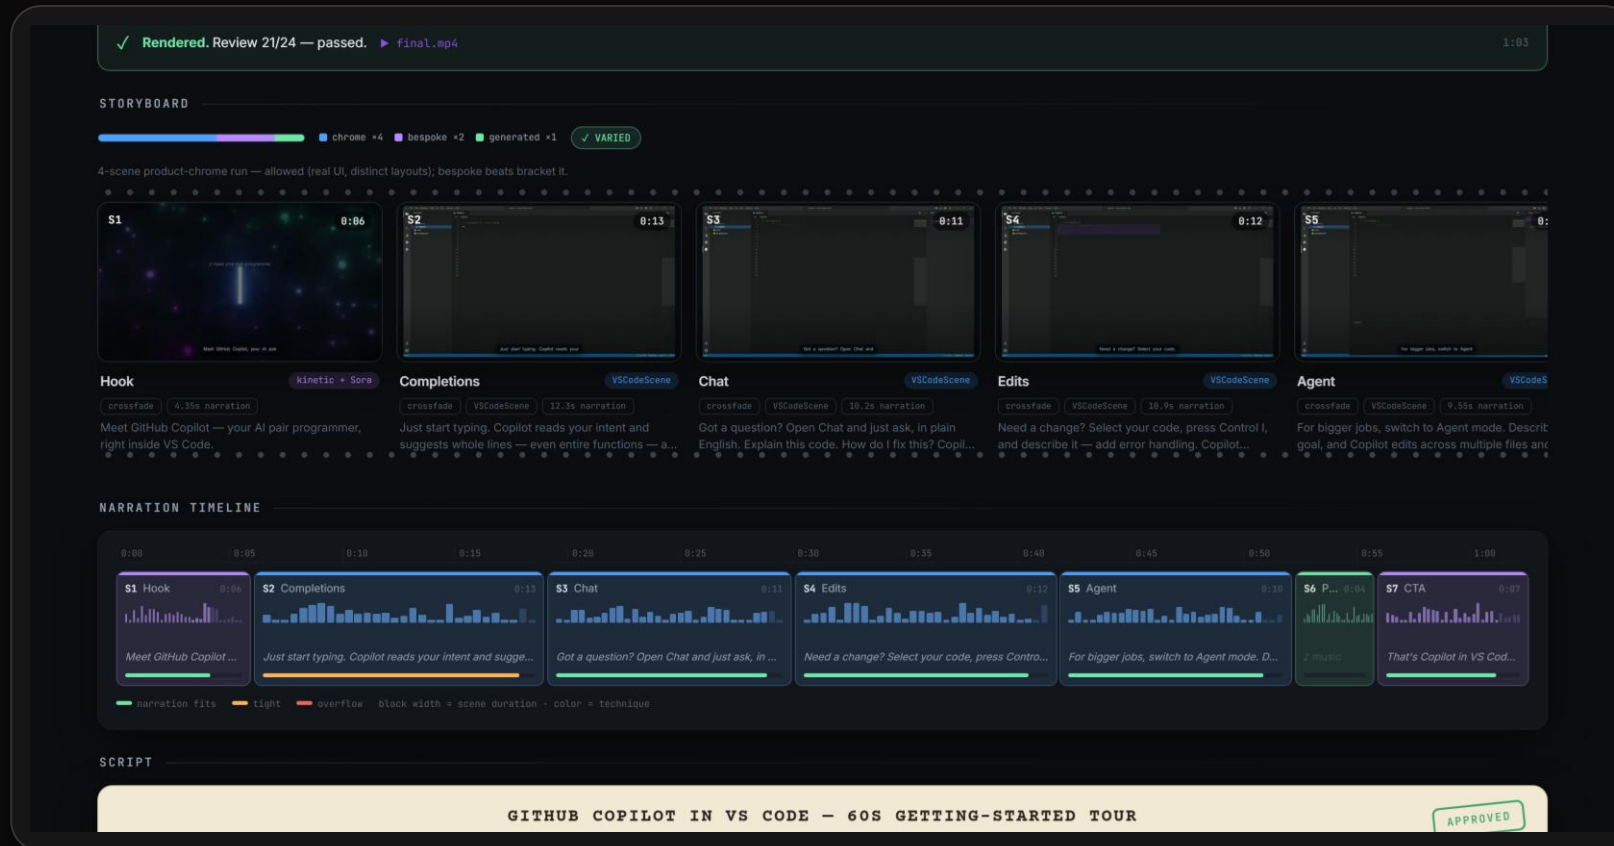

Audience, claims, pacing, visual treatment

WHAT WE MEASURE

Time, cost, quality, and where guidance enters

The production becomes visible before it becomes expensive.

Soundstage turns files, decisions, timing, and approval gates into a living storyboard.

SEE THE PLAN

Script, scenes, narration, and costs are on the wall.

CATCH IT EARLY

Pacing and sameness issues appear before render.

APPROVE WITH INTENT

The agent waits at creative boundaries.

Generated does not mean guessed.

Slate routes each visual to the treatment that can represent it faithfully.

REUSE

PRODUCT CHROME

VS Code, terminal,
Teams, Outlook,
Azure Portal

1

CRAFT

DESIGN VISUALS

Diagrams, charts,
kinetic type,
concept metaphors

2

GENERATE

GENERATED MEDIA

People, places,
illustration,
cinematic motion

3

Rule of thumb: never ask an image model to draw exact code, UI, charts, or numbers.

The director does not grade its own film.

A second agent reviews the final render across creative and technical dimensions.

Brand compliance

Caption accuracy

Audio quality

Visual consistency

Pacing

Content accuracy

Redundancy

Narration timing

If any dimension fails, Slate fixes, re-renders, and re-reviews before delivery.

The sweet spot: repeatable video with real information.

Especially when accuracy, customization, and turnaround matter more than handcrafted cinema.

01

PRODUCT

- Feature reveals
- Release recaps
- Roadmaps

02

ENGINEERING

- Architecture
- API explainers
- CLI demos

03

ENABLEMENT

- Onboarding
- Workflow training
- Policy updates

04

COMMUNICATION

- Org updates
- Event recaps
- Executive briefs

05

CUSTOMER

- Personalized demos
- Health summaries
- QBR videos

06

OPERATIONS

- Incident reviews
- Audit evidence
- Status narratives

Where Slate shines. Where it still needs a director.

SHINES

-  Turning structured source material into a coherent first cut
-  Synthetic product and workflow demos
-  Consistent brand, captions, and narration
-  Fast variants, localization, and repeatable updates

NEEDS GUIDANCE

-  Choosing the strongest story and what to leave out
-  Verifying factual claims and sensitive context
-  Judging taste, humor, emotion, and executive nuance
-  Handling hero creative that demands bespoke craft

A production studio inside your coding environment.

Local rendering plus optional Azure-backed generation.

1 LOCAL

Python 3.11+
Node.js 24+
FFmpeg

2 AGENT

VS Code +
GitHub Copilot

3 AZURE

Azure CLI +
AI Foundry models

4 PROMPT

Audience + goal +
duration + tone

Slate detects capability gaps and presents a setup plan before changing Azure resources.

Explore the engine. Study the open-source inspiration.

1

SLATE

github.com/gim-home/SlateStudio

Code, architecture, use cases, components

2

OPENMONTAGE

github.com/calestio/OpenMontage

Public open-source inspiration and examples

3

START HERE

[README.md](#) -> [docs/EXAMPLE_USE_CASES.md](#)

Then run `setup.ps1` and describe a video

FIRST PROMPT

"Turn this
deck
into a 60-
second
video for..."

THE FUTURE OF VIDEO IS DIRECTED, NOT JUST EDITED.

What would you ask an AI director to make?
